Freedom Lab NYC

The Origin

In October 2024, our first event brought together a handful of Bitcoin and freedom-tech enthusiasts in the city. We asked them, "What should we do next?" The answer was overwhelming: education that would help attendees level up their skills. New York City has events of every stripe, but it lacked hands-on classes, workshops, and demonstrations that teach practical skills using the latest freedom-tech tools.

We quickly developed a two-pronged approach: educational material that is accessible to the layperson, and an environment where our most advanced and technically proficient members can collaborate and teach others.

How We've Grown

Keeping Bitcoin and the cypherpunk ethos at the core, we have expanded our focus to sovereign AI, open-source tools, self-hosting, and more. We now have a robust community of technically proficient professionals who stay on the cutting edge of digital privacy, sovereignty, and freedom.

With the launch of our own physical space in Manhattan, we are laying the foundation to deepen our community roots, increase event frequency, and expand our reach across New York City.

Where We're Headed

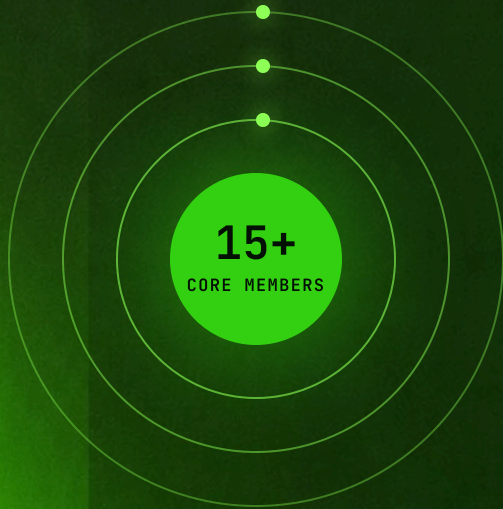

Our next two years will focus on three priorities:

1. Community
2. Growth
3. Bringing truly useful + usable freedom tech to NYC

These priorities will broaden our membership, deepen our pool of technically capable users, and support them as they develop useful tools and drive freedom-tech adoption across New York City.

After building our reach and impact locally and online, we plan to rent our own ground-floor space in Manhattan. Clear, distinct branding will establish it as the area's hub for authentic freedom-tech enthusiasts. New York City's global relevance gives Freedom Lab the opportunity to become one of the world's most prominent and impactful freedom-tech hubs.

Community

800+

Total attendees

Number of attendees who have RSVP'd to our events

195+

Repeat attendees

Attendees who have returned for more than one event.

45+

Frequent members

Frequent participants in our workshops, classes, and events.

15+

Core members

Our core community that regularly participates in events, helps grow the lab and works on freedom tech projects together.
